JUSTIN MAYER

AI SOFTWARE ENGINEER

Software Engineer with 4+ years of experience in modern JavaScript frameworks, backend development, distributed systems using queues, and AWS services. Currently transitioning into AI development. Experienced in data extraction and analysis, building reliable ETL pipelines. Quickly understands and adapts to complex codebases, delivering scalable and maintainable features while integrating testing and CI/CD practices. Actively embraces AI-assisted development to improve productivity and engineering efficiency.

LinkedIn Profile - Github Profile

Education

- Bachelor of Computer Science (Hons) - Middlesex University 2020-2023
- Certifications:
  - Developing AI Apps and Agents on Azure
  - Claude Code / API Anthropic courses
  - Github Actions

Skills & Techs

- Proactively adopting AI tools to enhance code quality and productivity
- Strong ability to understand, navigate, and maintain existing codebases
- Problem-solving, attention to detail, and code quality
- Vue.Js, React, Next.Js, PostgreSQL, Node.Js, BullMQ, Redis, Typescript, REST APIs, BullMQ
- LangChain, OpenAI/Claude SDK, Foundry, FastAPI
- Cloud/DevOps fundamentals: AWS (EC2, S3, API Gateway), Azure (CU, Blob storage, Foundry), CI/CD, automated testing, Docker
- Git, GitHub
- Mobile development: Flutter, React Native
- PHP, Wordpress
- .NET, C#

Projets

- Mauritian Banks Forex rate API
- OsInvoice: Simple invoice app for sole traders
- Zetpa: Surplus Food Marketplace app.
- Prep: Nutrient and Budget tracking app (In Progress)

Experience

2024-2026

Software Engineer – LeadsCloser.ai

- Led frontend refactor of a web application using modern UI frameworks (shadcn/ui), improving
- maintainability and UX consistency
- Dockerized existing project to make CI/CD pipelines 100% more easier to set up and maintain
- Exposure to AI and LLM development in Python
- Designed and improved distributed background processing using BullMQ and Redis for asyn-
- chronous processing of thousands of emails daily
- Designed and built APIs for an AI-powered chatbot application, with Vue.js frontend and FastAPI backend using LangChain (Python)
- Optimized backend performance through SQL procedure development, in-database cron jobs, and query tuning, improving dashboard performance by 50%
- Developed scalable web scraping pipelines to extract data from dozens of websites in parallel
- Worked on Oracle and Oracle APEX applications, including SQL procedures and backend logic

2023-2026

Freelance Part-Time WordPress Developer – BlueBoa Ltd

- Developed custom WordPress themes tailored to client requirements
- Built and delivered responsive websites using WordPress block builders
- Collaborated directly with clients to gather requirements and deliver production-ready websites

2021-2024

Junior Software Engineer – Dodobird.ai

- Developed and maintained WordPress plugins for internal and client-facing applications
- Implemented full-stack features using Vue.js on the frontend and Node.js on the backend
- Built Python-based data pipelines ingesting hundreds of thousands of records to support web
- application workflows
- Contributed to existing codebases through feature development, bug fixes, and performance
- improvements
