

Justin Mayer – *Software Engineer*

+230 5921 3244 jusmayer@outlook.com
jpjmayer ReyJust

Professional Summary

Software Engineer with 4+ years building full-stack web applications, background processing systems and data pipelines with TypeScript and Python. Delivers end to end, from email queues handling thousands of messages daily to a 50% faster dashboard and stack-wide observability with OpenTelemetry, and gets up to speed quickly in existing codebases. Growing focus on AI: LLM tool-calling chatbots and document AI features, with AI-assisted development as part of the daily workflow.

Experience

Career Break – *Working Holiday, Australia* **Feb 2026 – Dec 2026**

Software Engineer **Jan 2025 – Dec 2025**
LeadsCloser.ai

- Led frontend refactor of a web application to modern UI frameworks (shadcn/ui), encapsulating legacy modules so the app could be migrated progressively with zero downtime, improving maintainability and UX consistency
- Containerized the application with Docker to simplify CI/CD, and handled production deployments, including rolling out Prisma migrations on PostgreSQL and recovering from failed ones
- Implemented OpenTelemetry across 3 interconnected systems with a self-hosted Grafana LGTM backend (Prometheus, Tempo, Loki), unifying their logs into single end-to-end traces and adding alerts that sped up debugging and improved uptime
- Designed and improved distributed background processing using BullMQ and Redis for thousands of emails daily, including a rate-limiting algorithm to stay within sending caps
- Built APIs and LangChain tools for an AI-powered chatbot (Python, FastAPI) with a Vue.js frontend, working across the full conversation cycle from user message to tool calls and response
- Optimized backend performance through SQL procedure development, in-database cron jobs, and query tuning, improving dashboard performance by 50%
- Developed scalable web scraping pipelines to extract data from dozens of websites in parallel
- Developed Oracle APEX applications, writing SQL procedures and backend logic
- Resolved client-reported bugs through a ticketing system, communicating directly with clients from report to fix

Freelance Software Developer **2023 – 2026**
BlueBoa Ltd, Catamaran Cruises and others *Part-time*

- Built around 8 landing-page websites for small businesses, mostly with Elementor and some with custom WordPress themes
- Migrated 6 client websites to new hosting, taking over from previous IT providers and handing full ownership back to the owners
- Turned provided Figma designs into responsive, production-ready websites
- Built multi-threaded Python web scrapers for website with 10,000 pages

Junior Software Developer **Apr 2021 – Dec 2024**
Dodobird.ai *Part-time during studies until Apr 2023*

- Built e-commerce plugins for WordPress, Shopify and nopCommerce, including a WordPress plugin that displays AI product recommendations and embeds a Vue.js chatbot
- Implemented full-stack features with Vue.js and Node.js (Express, TypeScript, PostgreSQL), including a queued bulk data import
- Built a source-agnostic CRM data ingestion pipeline in Python with Kedro, scheduled with Apache Airflow, processing hundreds of thousands of records

Projects

- **Praline Recognition:** Tool built to speed up checkout at an Australian café and chocolatier. Identifies pralines from a photo with 93% accuracy using Azure AI Content Understanding, matching against a text description of each praline, then shows the POS checkout steps to follow
- **Prep:** Nutrition and budget tracking app (in development), with receipt scanning and nutrition-label extraction built on Azure AI Content Understanding
- **Zetpa:** Flutter surplus food marketplace for Mauritius (built, not currently operating), letting businesses sell unsold food at a third of the price at the end of the day to reduce food waste; integrated Peach Payments and Google Maps
- **OsInvoice:** Invoicing app for sole traders that generates PDF invoices and drafts the client email automatically; used day to day for real sole-trader invoicing
- **Mauritius Forex:** Scraper that collects Mauritian rupee exchange rates automatically every business day and serves them as a free, API-like dataset through GitHub raw content

Skills

- **Programming:** TypeScript, JavaScript, Python, SQL, PHP, C#
- **Web:** Vue.js, React, Next.js, Node.js, FastAPI, PostgreSQL, Prisma, Redis, BullMQ, WordPress
- **Mobile:** Flutter, React Native, Google Maps, Peach Payments
- **AI:** LangChain, OpenAI and Claude SDKs, Azure AI Foundry, Azure AI Content Understanding
- **Data Processing:** Python, Pandas, Jupyter Notebook, Kedro, Apache Airflow, web scraping
- **Cloud & DevOps:** AWS, Azure, Docker, CI/CD with GitHub Actions, OpenTelemetry, Grafana
- **Strengths:** versatility, teamwork, proactive adoption of AI tools, quickly navigating and maintaining existing codebases, problem-solving, attention to detail and code quality

Education

- **GitHub Actions (GH-200)** – *Microsoft* Nov 2026
- **Azure AI Apps and Agents Developer Associate (AI-103)** – *Microsoft* Jul 2026
- **Claude Code and Claude API courses** – *Anthropic Academy* Jun 2026
- **Bachelor of Computer Science, First Class Honours** – *Middlesex University* Oct 2020 – Apr 2023

Languages

- French (Native)
- English (Proficient)
- Mauritian Creole (Fluent)

Hobbies & Interests

Running **Assistant Scout Leader**

Cooking & Baking **Health, Fitness & Nutrition**
